

Oil Proration Data

Amended

July 1986

Sample Format: Oil Proration Data Form

The listing under pool name includes the pool types. Pool Name:

Column 1: Initial Recoverable Reserves - Self explanatory.

Half Cumulative Production - As at December 31st of previous year. Column 2:

Column 3: Proratable Reserves - Column 1 less Column 2.

Pool Reserves Allocation - The product of the provincial allocation factor(3) and the pool proratable reserves. Column 4:

reserve allocation to permit production, to the extent feasible, Pool Incapability Factor - The estimated factor to be applied to the pool's The factor will always be greater than, or equal to, of it.

Adjusted Pool Allocation - The product of the pool incapability factor and the pool reserves allocation (Column μ). The column also shows the pool type allocation, where applicable. Column

The factor may be less than, greater than, allocation (Column 5) to provide the estimate of expected pool Pool Performance Factor - The factor to be applied to the adjusted pool (Column 6). or equal to, unity. production

Expected Pool Production - The product of the adjusted pool allocation (Column 5) and the pool performance factor. Column 6:

For natural depletion areas, it Productive Acreage - The acreage to which the pool type acreage allocation is finally assigned. excludes nonproductive acreage. -Column

Weighted Acreage - The product of the acreage assigned to each case of natural depletion areas, the total may include, where pool type and the appropriate recovery factor modifier. appropriate, nonproductive acreage. ... | | Column

Allocation Per Acre - The quotient of the pool type allocation (Column 5) and the appropriate acreage as given in Column 7. Column 9:
